

COMICCRAFT AI

Comic Story Creator using Gemini Models

FRONT PAGE / PRODUCT CONCEPT

A visual AI workspace for turning an idea, character references, and a story prompt into a structured comic: cover → script → panels → dialogue → exported PDF.

EMPTY SPACE — ADD YOUR LOGO / PROJECT NAME / CREATOR NAME HERE

1. ComicCraft AI — Product Description

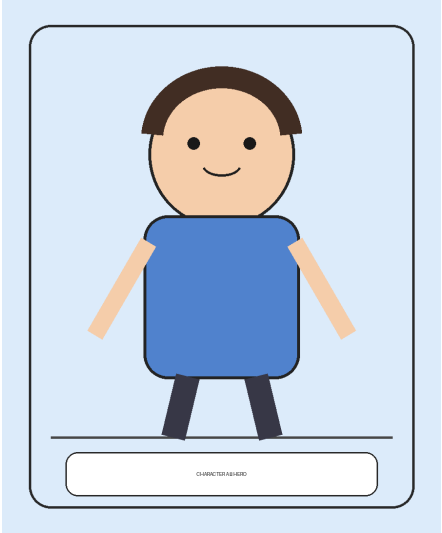

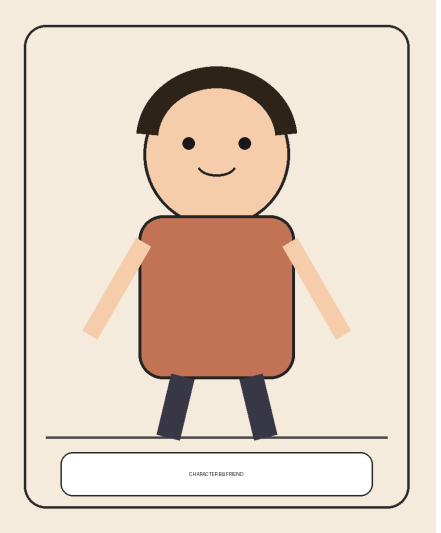

Goal: Let a user enter a story idea and create a complete comic package while keeping characters visually consistent. The app should separate story generation, character references, image generation, panel layout, and PDF export so each part can be edited.

Core screens

Screen	What the user does
Create Story	Enter title, genre, audience, tone, characters, setting, and number of pages.
Character Studio	Upload sample/reference images and describe each character's clothing, colors, personality, and visual traits.
Story Planner	Gemini turns the idea into pages, scenes, panel descriptions, captions, and dialogue.
Panel Generator	Generate or edit each panel using the story text plus approved character references.
Comic Editor	Drag panels, edit bubbles/captions, resize images, and leave intentional empty space.
Export	Create a print-ready PDF with cover page, page numbers, margins, and the selected page size.

2. Sample Character References & Photo Uploads

Use a reference-image upload area for each recurring character. The user should be able to add several approved references and a written description. Gemini image models support image editing and multiple reference images; current Gemini documentation describes character-consistency workflows and reference-image limits by model.

	
Character A Hero • blue jacket • friendly expression Reference approved: YES	Character B Friend • warm jacket • curious expression Reference approved: YES

Character description template

Name: [character name]

Role: [hero/friend/villain/etc.]

Visual identity: [hair, face, clothing, colors, accessories]

Personality: [3–5 traits]

Keep consistent: [features that must not change]

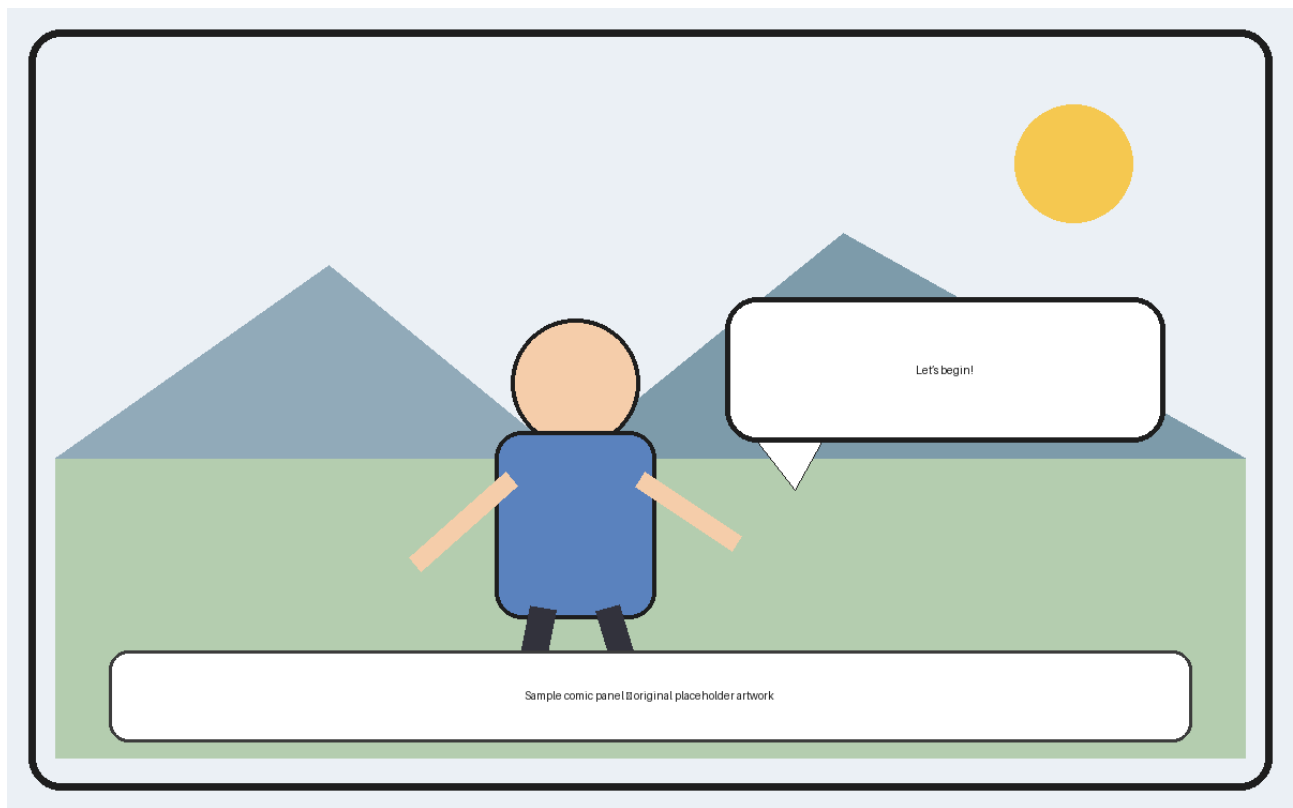

Allowed variation: [pose, facial expression, lighting, location]

IMPORTANT EMPTY UPLOAD SPACE

DROP / UPLOAD SAMPLE PHOTO OR CHARACTER REFERENCE HERE

3. Sample Comic Page Layout

Recommended editor behavior: preserve a clear gutter between panels, keep dialogue inside safe margins, and allow the creator to intentionally leave blank areas for later artwork or handwritten notes.

PANEL 1 — IMAGE / EMPTY AREA	PANEL 2 — IMAGE / EMPTY AREA
CAPTION / DIALOGUE	CAPTION / DIALOGUE

Blank space is intentional: the creator can later add a generated panel, upload an image, or place notes without changing the page structure.

4. Gemini Workflow & Copy-Ready Prompts

Suggested model split

Task	Suggested Gemini model
Story outline, scene planning, dialogue	Gemini text model appropriate to your latency/cost target
Fast image generation/editing	gemini-3.1-flash-image (Nano Banana 2)
Low-cost/high-volume image work	gemini-3.1-flash-lite-image (Nano Banana 2 Lite)
Professional complex artwork / high-resolution assets	gemini-3-pro-image (Nano Banana Pro)

Story prompt

Create a comic story outline from this idea: [IDEA]. Genre: [GENRE]. Tone: [TONE]. Create [N] pages, each with [M] panels. For every panel return: page number, panel number, setting, character actions, camera/composition, emotion, caption, dialogue, and a concise image-generation prompt. Keep character descriptions consistent across all pages.

Panel image prompt

Create a comic panel for page [P], panel [N]. Use the approved reference images for [CHARACTERS]. Scene: [SCENE]. Action: [ACTION]. Camera: [SHOT]. Lighting: [LIGHTING]. Mood: [MOOD]. Maintain the characters' defining visual traits. Leave a clean, intentional empty area of [LOCATION] for dialogue/caption placement. Do not change the established costume or character identity.

Cover prompt

Create a vertical comic-book cover for '[TITLE]'. Feature [CHARACTERS] in [SETTING]. Use a clear title area at the top and a clean empty area at the bottom for creator name, issue number, or logo. Professional comic-cover composition, strong focal point, readable title treatment, no extra text.

5. Exact PDF Export Specification

Item	Specification
Page size	A4 portrait (210 × 297 mm)
Margins	15–18 mm safe margin; keep text and speech bubbles inside it
Cover	Full front page with title, artwork, and reserved empty space
Comic pages	1–6 panels per page; adjustable gutters
Images	High-resolution raster artwork; preserve aspect ratio
Text	Selectable text for title, captions, dialogue, and metadata where possible
Blank space	Dedicated editable/empty regions must remain blank until the creator fills them
File	Single PDF containing cover + comic pages + optional credits
Filename example	ComicCraft_[ProjectName]_Final.pdf

Implementation note

For a production app, keep the story state separately from the visual assets: Story JSON → Character Reference Library → Panel JSON → Generated Images → Layout JSON → PDF renderer. This makes it possible to regenerate one panel without rebuilding the entire comic.

FINAL NOTES / REQUIREMENTS — LEAVE THIS AREA EMPTY
